

ABSTRACT

1 A mobile electronic apparatus including a memory and a
2 system for prioritizing the user stored files in the
3 memory relative to one another. The memory includes user
4 stored files therein. Each user stored file has more
5 than one different prioritization parameter associated
6 therewith. The system for prioritizing the user stored
7 files in the memory relative to one another includes
8 means for prioritizing the user stored files relative to
9 each other based upon at least two of the different
10 prioritization parameters.
